EDUCATION

University of Illinois Urbana-Champaign

B.S. in Systems Engineering and Design

Champaign, IL

Aug. 2024 – May 2028

Track Option: Robotics and Automated Systems | Minor: Computer Science

Relevant Coursework: Discrete Structures, Engineering Design, Optimization Models, Business Side of Engineering

Cumulative GPA: 3.5/4.0

EXPERIENCE

EDRA Labs

Artificial Intelligence Research Intern

June 2026 – July 2026

- Researched and tested a Gemma 3.0-powered AI chatbot's ability to interpret social cues and produce natural conversational responses, using RLHF to iteratively refine user-facing behavior.
- Programmed an automated workflow to drive user engagement, growing to 250 users within 4 days of launch, while balancing cost and output quality through iterative experimentation.
- Benchmarked AI models across output quality, cost, latency, and scalability, translating findings into actionable model-selection recommendations for company projects.

Mondelez International

Research and Development Intern

January 2026 – May 2026

- Researched market needs and developed a new product concept targeting the 18–24 age segment to expand market reach.
- Theorized, prototyped, tested, and presented findings to stakeholders at regional headquarters in New Jersey within 6 months, 3x the speed of the traditional 18-month production cycle.
- Partnered with senior team members to translate operational insights into an AI-driven pipeline, shifting production from iterative to calculated processes and improving creation timelines by 50%.

Second Chance Innovations

Founding Engineer

August 2024 – December 2025

- Designed the capstan housing, lace-closure, and upper-arm brace for a post-stroke elbow-extension device, co-engineering the system around patient comfort and usability.
- Interviewed patients and experts to gather feedback, then iterated the prototype design, improving range of motion by 20% and producing a DFM-ready, user-validated design.

PROJECTS

Human Computer Interaction Research

Research Assistant

January 2026 – Present

- Built a voice-activated virtual assistant, paired via Bluetooth with Meta glasses, to observe user environments in real time and surface behavioral insights for research analysis.
- Applied findings to improve user decision-making speed and reduce cognitive load by 15 points on the NASA-TLX scale, a standard usability research metric.

InvestTech.AI

Co-Founder

June 2025 – Present

- Co-developed a research tool that pulls, processes, and organizes financial, news, social, and industry data, improving research efficiency by 600%.
- Developed a secondary post-processing model that ranks insights by importance and generates 12-month projections with supporting calculations.

SKILLS & CERTIFICATIONS

Languages: English (Native), Hindi (Native), Spanish (Intermediate), Telugu (Beginner)

Skills: Prompt Engineering | ML | Automation | Leadership | Python | MATLAB | Fusion 360 | SEO | C++

Certifications: 6 Sigma Green Belt | Phi Eta Sigma National Honor Society | IBDP
